

## MaiA S2

**"This is a seriously high-fidelity integrated-DAC"**

**Visit the Site**

I could hear **all the detail and dynamic range** of his instrument, which helped me **feel his emotion** – all courtesy the MaiA S2.

through **the MaiA S2 both were essentially perfect** – the Pro-Ject never got in the way of the speakers' ability to produce **solid images on a convincing soundstage**.

when I heard the **full-range sound** this combo produced, I stopped laughing and **my jaw dropped**.

At loud levels, **the high frequencies remained composed**, without getting brittle or edgy.

the dynamics of the **drums were tight and punchy**.

This little integrated **wasn't outclassed** by far more expensive gear.

The most **remarkable aspect** of the MaiA S2 **was its sound**.

The MaiA S2 **sounded way better** than I thought it could – it **punched way above its class**.

I highly recommend that you give the MaiA S2 a listen.
