

Head Box DS2 B

„Anyone looking for a specialist should definitely listen to the Head Box DS2 B!“

Highlight**

Swing In The Latest Style

Listening to music is a great pleasure with this Pro-Ject. It combines relaxed consonants with a beautifully high-resolution sound. Diana Krall played wonderful, clean and clear in "I'm An Errand Girl For Rhythm." The higher the current-setting, the more bass volume (and energy) the music got - a beautiful "tone control light". Compared to built-in headphone amps, the Head Box DS2 B plays **more natural more textured and deeper**. We could not find a headphone with which the head box would not have worked wonderfully with.

Conclusion

The Pro-Ject Head Box DS2 B focuses on one task and one task only - preparing the music signal for headphones. **It does so in an excellent way:** it gives the music a more lively, more clean and more natural sound that allows for effortless listening sessions.

In addition, the equipment is right: headphones can be connected symmetrically and asymmetrically, two sources can be connected, two headphones can be operated parallelly and **the operation prepares no headache at all.**
