

Debut Alu Sub-Platter

"Spacious, detailed and effortless"

- With it fitted, there is an **appreciable and immediate improvement in fine detail and clarity**. Even on a perfectly flat record, the Clamp IT demonstrates an **immediate and tangible benefit**. These **advantages are boosted** further by the Debut Alu Sub Platter Upgrade and Acryl IT Acrylic Platter Upgrade.
- The subplatter is a **one-piece metal unit** that replaces the metal and plastic one that comes with the Carbon Evo. It's a substantially heavier and **more rigid** option and the effect it has on the already good **pitch stability is deeply impressive**.
- The way the upgraded turntable handles music is more **spacious, detailed and effortless** than the stock deck is able to manage.
